

CAUTION !! All new procedures and processes should be checked in the 'Test' environment before being applied to the 'Live' business system.

Sapphire V10

WORKS ORDER PROCESSING – WIP MANAGER SCREEN – Ver 5

1. INTRODUCTION

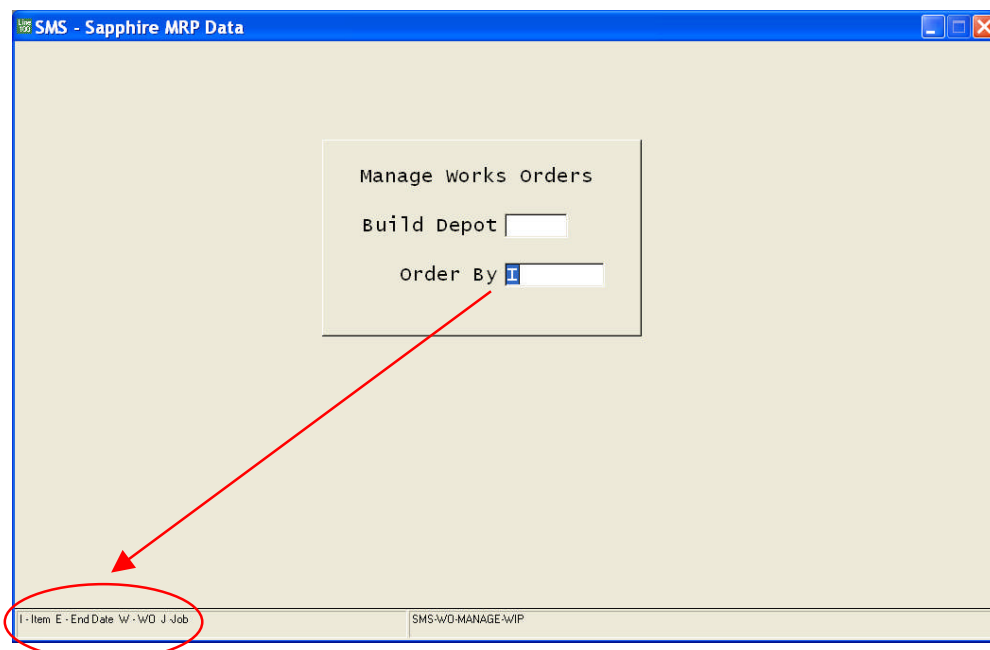

This feature was introduced for Version 10. It had been applied selectively as a Beta release to a few Version 9 sites, and the feature will be further enhanced in the Sapphire SQL release.

The objective was to produce a single point of entry into the software to allow management of the current Works Orders list.

The orders can be displayed in

- Item Number order, and sorted by date within item number
- End Date order
- Job Number order (shown in the detail box at the lower right of the screen, not as a separate column)
- Works Order No order (from SP2)

all options allowing easy scrolling to the required item.
